

Environmental Policy

The management and staffs of J Steel are committed to the identification of design and product solutions that minimise the use of raw material and energy through recycled and reusable materials to ensure ongoing environmental benefits and improved environmental performance. This commitment includes environmentally efficient energy and waste management, recycling, and education for positive environmental aspects/activities.

The following actions are fundamental to J Steel establishment and continuous improvement of the system:

- Developing an environmental management system that is compliant with and certified to ISO 14001, and applicable legislation.
- Working with clients and contractors to identify environmental aspects/impacts that need to be addressed as part of the service and product delivery.
- Ongoing identification, assessment and control of workplace environmental aspects/activities, impacts and controls.
- Management continuously seeking to improve the environmental management system and identifying positive aspects/activities which may be applied to products and services.
- Policy and procedures for the selection and application of services and products, reduction of energy, segregation of waste for recycling activities and prevention of pollution.
- Active training of staff in environmental issues, and the development of a response process to address emergencies.
- The identification of dangerous goods and the provision of safety data sheets (SDS) for easy reference at the point of storage and transportation of dangerous goods/waste.
- Establishing environmental objectives and processes through internal reviews of the system to identify strategies for rectification and continuous improvement.
- Maintaining the required documentation and controls of the environmental management components within the Integrated Management System.
- Reporting and investigation of incidents and non-conformances.
- Making sure management and staff are committed to the segregation, recycling and efficient disposal of waste.
- Minimising the carbon impact of the business through efficient energy use and payment of carbon offsets where practical.
